Criterion E:

Criteria for success:

1. (Met) It should be user-friendly since my cousin is not good with computers

   Everything in the program is labeled correctly, and buttons are marked for a friendly experience meeting my criteria.

2. (Met) It should be able to store information after exiting the program

   Information is successfully saved when exiting the program and brought back when the program is opened again, achieving my criteria.

3. (Met) It should be able to add dogs with all of the information

   Dogs are added to the program with all the features necessary for the user's demands. Criteria met.

4. (Met) It should be able to show the days when the dogs are taken out

   This is successfully shown when the user enters the page Schedule. The day is shown with its corresponding hour. Criteria for the success achieved.

5. (Met)Show the user what the payment is monthly for a specific dog

   The payment information can be found in the show and modify section. Achieved.

6. (Met) It must be able to work with monthly payments and modify them.

   All payments are specified to be monthly and can be modified in the Economy section of the program. Criteria completed

7. (Met) It should store the image with the clinical vet information

   Images and any other can of file can be added to the profile of a dog in the add section and can be viewed or modified in the show and modify section. Done

Clients feedback:

The client enjoyed and appreciated my program. He liked how it worked and how dogs' profiles were saved. He also wanted the Economy and Schedule to be handled differently since it gave him tons of information and made it easier to help him with his organization. He said the GUI tripped him up since so much information was displayed.

Recommendation for future developments:

- In Schedule, beside the location, a mini-map could appear to locate the house.
- Make this application available to more people worldwide and create a community between dog walkers.
- A new feature could be added to pick up dogs on the go without needing to schedule.
- Connect the app with vets and pet shops to create one whole system for users and dog walkers.
